“Road traffic incidents: an emerging epidemic and can we make an epidemic “U” turn?”

Sri Ramula Sai Dilip*, Radhika Rani Chandra Taaneru Venugopal

From EMCON 2014: International Conference on Emergency Medicine; 16th Annual Conference by the Society for Emergency Medicine in India (SEMI) Mumbai, India. 6-9 November 2014

Objectives

To assess Knowledge, Awareness, practices regarding road safety measures and consequences of Road Traffic Injuries (RTIs) among medical students of Guntur Medical College and Hospital, Guntur.

Methods

A cross-sectional study was conducted among medical students of Guntur Medical College and Hospital using pretested and semi-structured questionnaire in the month of September 2014. The collected data was entered in MS Excel and analyzed by EPI INFO.

Results

Among 206 students interviewed, 166 (80.6%) were females and 40 (19.4%) were males. Among the study subjects, 123(59.7%) drive motorcycles but only 83 (40.3%) have a license. Majority 121 (58.7%) had witnessed an accident. 201 (97.6%) out of 206 students knew that wearing helmet is safe, but only 89 (43.2%) wear helmets. Only 30.2% of the study group wears a seatbelt. Most of them, 73 (35.4%), have knowledge of traffic symbols.

Limitations

This study was done on medical students so it cannot be generalized to the public.

Conclusion

Observations of the study emphasize that there need to enhance knowledge and awareness among medical students through education training to curb the epidemic of RTIs.
